3336 PLUS™

SYSTEMIC FUNGICIDE

With **CLEARTEC™**  **Activation Technology™**

- ◆ Cleary Chemical is pleased to introduce NEW 3336 PLUS™ fungicide with Cleartec™ Activation Technology™. This is a systemic flowable fungicide containing Thiophanate-methyl.
 - ◆ Re-engineered formulation of Cleary's 3336® F with Patent-Pending Cleartec™ Activation Technology™ for enhanced disease prevention and control on golf course fairways.
 - ◆ Not a surfactant or penetrant adjuvant, Cleartec™ works specifically with Thiophanate-methyl changing the way it interacts with the plant and disease.
 - ◆ Designed to offer all the characteristics of 3336 while extending the length of control on Fairways by as much as 50% or more.
 - ◆ 5 years of University and Field Cooperator trials at golf courses around the USA indicate up to 28-day control on Fairways for a broad spectrum of diseases.
 - ◆ Broad spectrum control of a host of major Fairway diseases including Basal Anthracnose, Bermudagrass Decline, Cool Season Brown Patch, Dollar Spot, Fusarium Blight, Gray Leaf Spot, Pink Snow Mold and many others.
 - ◆ Flexible rate range of 2-8 fl. ounces per 1,000 sq. ft. depending on the target disease.
 - ◆ 3336 Plus™ can be tank mixed with contact fungicides such as Protect DF™ and Sporetre™ during curative situations.
 - ◆ Available in a unique 2½ gallon jug, easy to pour, stackable and recyclable.
 - ◆ Currently registered in all 50 states.
- NEW 3336 PLUS™ with Cleartec™ Activation Technology™ gives golf course superintendents another long-term “tool” for fighting fairway disease. Brought to you by the company who has been bringing great turf management products for 70 years.

Count on Cleary
