## TURF FUNGICIDES

### Fast Curative Activity – Plus Prevention!

Teremec<sup>®</sup> SP is a contact turf fungicide containing chloroneb for the control of snow mold, pythium blight, brown patch and southern blight. One of the most cost effective products for controlling these turf-destroying disease organisms, Teremec SP has been a standard in golf course and other turf management programs.

For extended control of snow mold, mix with TransFilm<sup>®</sup> Anti-transpirant. Pythium blight control is optimized by including

Teremec SP in rotation with other fungicides. To date, pythium has shown no resistance to Teremec SP.

Teremec SP is labeled for use on established warm- and cool-season turfgrasses such as creeping bentgrass, annual bluegrass, fescue, zoysia, St. Augustinegrass and bermudagrass. Teremec SP is also labeled for the control of southern blight in new seedling grass areas.

Teremec and TransFilm are registered trademarks of PBI/GORDON CORPORATION.
