

Peregrine®

Controls and prevents:

Anthracnose, Dollar Spot, Brown Patch, Rust, Copper Spot, Gray Leaf Spot, Leaf Spot, Red Thread, Snow Mold and others

Now Get Two Great Kinds of Fungal Control, With Less Risk of Resistance.

Peregrine® fights fungal diseases in a number of ways by delivering both contact and systemic control with many application options. Peregrine combines two proven active ingredients—chlorothalonil and thiophanate-methyl, in a 3 parts: 1 part ratio—in a quality WDG formulation. That synergistic combination gives you optimal control of a wide

variety of diseases including dollar spot, anthracnose and brown patch, while reducing the risk of resistance. Peregrine is labeled for use on golf courses, landscape plantings, sod farms, commercial lawns and nursery/ornamental plantings, and comes in convenient resealable 5 lb. jugs (4 per case).

Features

Both systemic and contact modes of action

Broad spectrum of control

Resealable container

Multiple use sites

Compatible with other pesticides

Benefits

Provides both preventive and curative control of diseases with no resistance issues

By effectively controlling so many of the most common and most damaging diseases, Peregrine simplifies your treatment and inventory programs while helping you maintain healthy turf and landscapes

Peregrine's convenient packaging is easy to use, resealable and offers easy disposal

Can be applied on both warm- and cool-season turf, as well as on landscape plantings, lawns, nursery, ornamentals and sod farms

Peregrine can be mixed with a variety of other pesticides, so you can reduce the number of applications required, provide broader spectrum of control and minimize the likelihood of disease resistance

Directions For Use:

To provide thorough coverage, apply Peregrine with ground equipment using sufficient volume of spray material: 3–5 gallons of water per 1,000 square feet. Use the higher recommended rates under severe disease pressure. Always calibrate sprayers prior to use. Continuous agitation is recommended to keep the product in suspension. When treating golf greens, always treat aprons and approaches as well to reduce chance of carrying disease onto the green. **Do not mix with products containing copper or highly alkaline pesticides as alkaline hydrolysis may reduce activity.**

Field Support:

When you need product or technical assistance, turn to Phoenix Environmental Care's local distributor network for responsive service and support. You can also direct any questions regarding Peregrine to 1-888-240-8856 for prompt attention.
